Mini-DMZ data management plan

Steven Wallace, PI, and David Hunter co-PI, will be responsible for the project's data management plan. The project's data are comprised of open source computer code stored in a public code repository. Wallace and Hunter will be responsible for ensuring the code in the repository is current and available to the public.

The project will create computer programming code used to implement the Mini-DMZ. The code will consist of python source code and bash shell scripts, in the form of text files. The data will be of modest size, less than 1MB total.

The data is open source computer program code, and will be continuously released while in development via the github code repository.

The data will be stored and archived in github. Github provides a web-based portal, as well as support for the git utility, to allow its download and use.

Question not answered.
