

Plan Overview

A Data Management Plan created using DMPTool-Stage

Title: Data Management Plan for the High Density Critical Pairs Concept Exploration System Project

Creator: Steven Landry

Affiliation: Purdue University System (purdue.edu)

Principal Investigator: Steven Landry

Data Manager: Steven Landry

Funder: National Aeronautics and Space Administration (nasa.gov)

Funding opportunity number: NNH16ZEA001N

Template: National Aeronautics and Space Administration (NASA)

Last modified: 11-18-2016

The above plan creator(s) have agreed that others may use as much of the text of this plan as they would like in their own plans, and customize it as necessary. You do not need to credit the creator(s) as the source of the language used, but using any of the plan's text does not imply that the creator(s) endorse, or have any relationship to, your project or proposal

Data Management Plan for the High Density Critical Pairs Concept Exploration System Project

In this project, data will be created from analysis and refinement of the algorithm, from testing of the software, and from human-in-the-loop simulations.

The data will be captured from running MATLAB and Excel analyses on the algorithm, from exercising the developed software, and from observation and data recording during the human-in-the-loop simulations.

The data will be made available through the Purdue University Research Repository, which requires a public login account. The data will be made available as soon as possible after it is generated. IRB permission will be obtained before collecting observational and performance data from the human-in-the-loop simulations, and de-identified data of that type will be made publicly available.

The publicly available data can be available for re-use without restriction. It is expected that other researchers may find the data useful for their own studies.

As much as possible, data used to generate figures or support conclusions in published papers will be included as supplementary information. Otherwise, the data will be made available through the Purdue University Research Repository or through a NASA archive as desired by NASA.

We will follow all IRB prescriptions for handling the archiving of human subjects data. For all other data we will maintain public access of the data either through the Purdue University Research Repository, a NASA archive, or another publicly accessible archive.
