

## Plan Overview

---

*A Data Management Plan created using DMPTool-Stage*

**Title:** Long-Term Human-Environmental Influences on Landscape Formation in the Belize-Guatemala Transboundary Area

**Creator:** Leila Donn

**Affiliation:** The University of Texas at Austin

**Principal Investigator:** Leila Donn

**Data Manager:** Leila Donn

**Funder:** National Science Foundation (nsf.gov)

**Funding opportunity number:** NSF 14-538

**Template:** NSF-SBE: Social, Behavioral, Economic Sciences

**Last modified:** 05-08-2017

### **Copyright information:**

## **Long-Term Human-Environmental Influences on Landscape Formation in the Belize-Guatemala Transboundary Area**

My data will be stored in Excel. I will input it into Excel, and back it up onto a hard drive. I will also save the data onto the Lab harddrive so others have access to it.

Data will be in Excel. It will include sample depths, dates, and lithologies. Data will be collected in the field as sediment core samples.

I plan to retain the data used in my research for for 7 years. This includes the two years to complete my master's degree, four years to complete my PhD, and an extra year in case my PhD takes longer than anticipated.

My data will be available through publications. The raw data will not be made available to those outside of collaborators and colleagues in my lab group.

The data will be saved for 7 years, digitally, on computers and hard drives. It will be Excel spreadsheets of numbers, recording information related to soil samples.

Question not answered.
