

Plan Overview

A Data Management Plan created using DMPTool-Stage

Title: DMP for The Role of Temperature in Regulating Herbivory and Algal Biomass in Upwelling Systems

Creator: John Bruno - ORCID: [0000-0003-2063-4185](https://orcid.org/0000-0003-2063-4185)

Affiliation: University of North Carolina at Chapel Hill (UNC-CH) (unc.edu)

Principal Investigator: John Bruno

Data Manager: John Bruno

Funder: National Science Foundation (nsf.gov)

Funding opportunity number: PD 98-1650

Grant: https://www.nsf.gov/awardsearch/showAward?AWD_ID=1737071

Template: BCO-DMO NSF OCE: Biological and Chemical Oceanography

Last modified: 05-23-2017

You do not need to credit the creator(s) as the source of the language used, but using any of the plan's text does not imply that the creator(s) endorse, or have any relationship to, your project or proposal

DMP for The Role of Temperature in Regulating Herbivory and Algal Biomass in Upwelling Systems

The project investigators will comply with the data management and dissemination policies described in the *NSF Award and Administration Guide* (AAG, Chapter VI.D.4) and the *NSF Division of Ocean Sciences Sample and Data Policy*.

Question not answered.

The types of data that will be collected include: (1) community pattern data (e.g., abundance/cover of algae, grazers, etc. at six sites, during each of the four seasonal surveys) collected via *in situ* surveys, (2) temperature data (from dataloggers at each site), other environmental data including flow and nutrient concentration data, and (3) experimental data (algal biomass, urchin grazing rate and metabolism, algal metabolism, algal tissue N, primary productivity, etc.).

All field data will be stored as xlsx files. Metadata will be prepared in accordance with BCO-DMO conventions (i.e. using the BCO-DMO metadata forms) and will include detailed descriptions of collection and analysis procedures. Metadata will include date, time, latitude, longitude, site name, field condition, and the reference page to the electronic field notebook as well as the link to the GitHub repository where all R code and outputs, used in the analysis of the data will be stored.

The investigators will store project data (spreadsheets, videos, ASCII files, images, field notes in txt format) on laboratory computers backed up: 1) daily using Apple Time Machine to an onsite external hard drive, 2) immediately to the Dropbox cloud server, 3) the projects GitHub repository (https://github.com/johnfbruno/Galapagos_NSF.git), 4) by UNC Biology Department's IT staff.

All information and materials generated by this project will be disseminated in accordance with University and NSF policies. We will adhere to and promote the standards, policies, and provisions for data and metadata submission, access, re-use, distribution, and ownership as prescribed by the BCO-DMO Terms of Use (<http://www.bco-dmo.org/terms-use>). All data will be freely shared and made available on the PI web site <http://johnfbruno.web.unc.edu/data/>, via GitHub, and archived and shared through the Biological and Chemical Oceanography Data Management Office (BCO-DMO). We plan to make much of the data available immediately and all of it freely available six months after the completion of the project. There are no ethical or privacy issues concerning the content or release of the data. The data is not covered by copyright and will not be licensed. All data will be released and openly shared free of charge and there will be no restrictions on re-use and redistribution.

The PI will work with BCO-DMO to ensure that project data are submitted to the appropriate national data archive.

Question not answered.
