INFLUENCE OF SOCIAL CAPITAL ON ORAL HEALTH CONDITIONS OF CHILDREN

- Demographic, socioeconomic and behavioral factors;
- Individual and contextual social capital;
- Oral conditions (dental caries and gingival bleeding);
- Data on contextual social capital will be obtained by the city official publication.

Oral health data will be collected through through clinical examinations performed by previously trained and calibrated examiners. Demographic, socioeconomic and behavioral factors were assessed at baseline and will also be obtained during follow-up through a semi-structured questionnaire applied to parents/guardians of schoolchildren.

All data will be added to a excel worksheet and then transfered to Stata Software.

We collected data of preschool children related to OHRQoL, clinical conditions and social capital in 2010. All this variables will be collected during the followup in 2020 and 2021. Data is codified in numbers with the respective subtitles in an excel worksheet.

metadata: title, author, keywords according to the Dublin core specification

This project was approved by the Research Ethics Committee (REC) of the Federal University of Santa Maria (protocol CAAE 11765419.1.0000.5346).

Data will be available by author permission

Data will be stored at a personal computer and will be backed up every 6 month.
