

Plan Overview

A Data Management Plan created using DMPTool-Stage

Title: Multimedia Text Annotation for Students

Creator: DMP dmpcurator

Affiliation: University of California, Office of the President (UCOP)

Principal Investigator: DMP dmpcurator

Data Manager: DMP dmpcurator

Funder: National Endowment for the Humanities (neh.gov)

Funding opportunity number: 8328

Template: NEH-ODH: Office of Digital Humanities

Last modified: 05-28-2014

Copyright information:

The above plan creator(s) have agreed that others may use as much of the text of this plan as they would like in their own plans, and customize it as necessary. You do not need to credit the creator(s) as the source of the language used, but using any of the plan's text does not imply that the creator(s) endorse, or have any relationship to, your project or proposal

Multimedia Text Annotation for Students

Type of Data: Open Source computer code associated with tool, interface, and server-side components development. When Shared: At conclusion of the start-up project, when initial testing has been completed. Under What Conditions: Code will be freely available. Type of Data: User-generated texts, annotations, and electronic multi-media collections generated during the testing phase. When Shared: None of these data will be publically available until the conclusion of the start-up project. Under What Conditions: These data will be made available at the discretion of the creator, who will control access via privacy settings. Copyrighted data will be dynamically excluded from collections and documents made available to the public. Type of Data: Assessment data generated during the testing phase. When Shared: Aggregated data will be shared via the white paper and final report to NEH. Under What Condition: No information will be shared that could identify individuals participating in the assessment process. Type of Data: White Paper When Shared: After the project has been completed. Under what conditions: The white paper will be freely available to the public via the project website. Type of data: A multimedia report posted on the project website. When shared: After the project has been completed. Under what conditions: The multimedia report will be freely available on the project website. Type of Data: A final report to the NEH. When shared: At the conclusion of the project. Under what conditions: Dissemination of the final report will be the responsibility of NEH.

Data will be retained for 5 years beyond the completion of the start-up phase of Annotation Studio Reports and aggregated data will be publicly available within 1 year of project completion, via the project website, copies of the data will be stored long-term in DSpace@MIT. <http://dspace.mit.edu/>

Computer code will be available as open source in a publicly accessible code repository (GitHub). Reports will be made available in PDF format and disseminated via the project website and through DSpace@MIT. All metadata associated with media documents in shared multimedia collections in Annotation Studio will be freely available on the Annotation Studio website, only copyright cleared media and text documents will be accessible to the public

All computer code will be stored in Github, where existing code base for Metamedia (Annotation Studio's precursor) and other HyperStudio projects and tools has been stored. <https://github.com/>. All other data, including user generated texts and annotations, (exportable as TEI/XML files), assessment data, reports, and publications will be stored in DSpace, MIT's online institutional repository for faculty and researchers. Copyright-cleared media documents will be stored in DSpace along with their respective collection and student interaction information. DSpace@MIT identifies two levels of digital preservation: bit preservation, and functional preservation. Bit preservation ensures that a file remains exactly the same over time – not a single bit is changed – while the physical media evolve around it. Functional preservation goes further: the file does change over time so that the material continues to be immediately usable in the same way it was originally while the digital formats (and the physical media) evolve over time. DSpace@MIT insures permanent data preservation in a secure and searchable archive, and is managed by MIT Libraries.
